`https://github.com/bjuste/EjerciciosT4..git`

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

```
echo "# EjerciciosT4." >> README.md
git init
git add README.md
git commit -m "First commit"
git branch -M main
git remote add origin https://github.com/bjuste/EjerciciosT4..git
git push -u origin main
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/bjuste/EjerciciosT4..git
git branch -M main
git push -u origin main
```

...or import code from another repository
You can initialize this repository with code from a Subversion, Mercurial, or TFS project.
